readline()

Welcome message:

[Clear the terminal]

[ASCII logo]

Hello, [first name].

What would you like to do today?

For further assistance, type "Help".

readline()

processrequest()

Help message:

Welcome to [bank name].

This is a banking service that works by accepting requests written here in the terminal.

To make a request, simply type the command that you wish for the bank to process.

A list of commands is shown below:

<command> || <description>

If you have any queries about this service, don't hesitate to contact us.
